Traction Release Notes

Updates and Enhancements

»Traction
A Kimley-Horn Software Solution

OCTOBER 2019

» (Website) Azure Congestion Playback shows a visualization of traffic conditions over time. User may select a route and start date and use the play, pause, and time slider to view the data.

» (App) Crowd Data travel times are viewable from the mobile app. Settings can be applied to sort by date/time or route name, and filter by data source or a user's tagged routes.

» (Website) Crowd Data list is reformatted in a grid view, allowing sorting, searching, and filtering by tags.

» (Website) Route creation/edit supports verification of the Azure route by toggling 'Check Azure Route'. Users may also view the available route points by toggling 'Show Vertex Points'.

» (Website) Confirmation box will appear when agencies in the Connected Citizens Program (CCP) enter and submit a name in the Waze Name textbox.

» (Website) Routes page supports users selecting routes by clicking on the route on the map.

» (Website) Crowd data schedule list retains the order in which schedules are added upon saving.
